SEDana.1.2

[SEDana](#) : Launching SEDana

Launching SEDana

To launch SEDana to analyze STDF files, you can use the Teradyne entry on the Start menu:

Start>Programs>Teradyne IG-XL Vx.xx.xx>Open STDF File>SEDana Test Analysis Tool

You can also launch SEDana from DataTool, on the IG-XL Tools tab, in the Test Analysis group:

SEDana Button in DataTool

When you launch SEDana, either SEDana Lite or full SEDana is enabled, depending on your license file. By default, the standard IG-XL license enables SEDana Lite.

When SEDana Lite first comes up, it displays a warning message for each full SEDana feature that is not supported by the standard IG-XL license.

SEDana : SEDana Lite

SEDana Lite

SEDana Lite is the name for the set of SEDana features available with the standard IG-XL license. Features available with SEDana Lite include:

- | | |
|---|-----------------------|
| • | Raw Data Table |
| • | Capability Table |
| • | Reproducibility Table |
| • | Histogram |
| • | Trend Chart (2D Plot) |
| • | Pareto |
| • | Wafer Binning Plot |
| • | Filtering Capability |

Basic filtering: by test, bin, site, part)

- | | |
|---|-------------------------|
| • | Text (Summary, Datalog) |
|---|-------------------------|

- [ATDF To STDF Conversion](#)

- [STDF To ATDF Conversion](#)

- [Generate Report](#)

Limited version: Tables limited to a maximum of 10; Graphs limited to a maximum of 25.

<	>
-----------------	-----------------

[SEDana](#) : SEDana Help

SEDana Help

SEDana comes with its own help system.
To launch the SEDana help system, click the SEDana Help button.

You can also launch SEDana help from within the SEDana group on the Windows Start menu:
Start>Programs/Programs (x86)>Salland Engineering>SEDana.

SEDana : Obtaining a Full SEDana License

Obtaining a Full SEDana License

The standard IG-XL license gives access to the set of features defined as SEDana Lite. To access all SEDana features, you must purchase a license for full SEDana.

To obtain an SEDana license, you can send a license registration request to:
software.administration@teradyne.com

SEDana

SEDana

SEDana is the Salland Engineering Data Analysis Application, a test analysis tool for statistical analysis of ATE test data. The analysis consists of statistical calculations, filtering tools, and various textual and graphical displays.

SEDana works well with IG-XL because it can take STDF files as input, in addition to other formats. IG-XL can generate STDF files as part of its datalogging.

The SEDana software is installed with IG-XL. The standard IG-XL license automatically gives access to a subset of SEDana features. The subset is called SEDana Lite. Anyone with an IG-XL license can automatically use the features defined as part of SEDana Lite. Features that are not part of SEDana Lite are disabled.

To use all SEDana features, contact Teradyne to get a full SEDana license. This license enables all of the full SEDana features.

SEDana will continue to be included in IG-XL releases. Any new features or bug fixes for SEDana will be included in releases of IG-XL.

Help is available with SEDana. The following sections cover topics specific to using SEDana with IG-XL:

- | | |
|---|---|
| • | Launching SEDana |
| • | SEDana Lite |
| • | SEDana Help |
| • | Obtaining a Full SEDana License |
